

Dashboard Page Documentation

1. Page Overview

This document describes the Tradenix Dashboard page shown in the provided application screenshot. It covers the dashboard filters, chart controls, summary panels, table layout, refresh action, and the expected user flow for reviewing declaration status information.

2. Page Purpose

The Dashboard provides a consolidated view of declaration activity. It allows an authorized user to filter the displayed information by declaration flow and status, switch the chart presentation between Bar and Pie views, review period-based summaries, and refresh the displayed dashboard data.

3. Navigation

Expected navigation path:

- **Dashboard**

4. Dashboard Page Overview

Figure 1. Tradenix Dashboard page

The page contains declaration and status filters at the top, chart-type controls, period-based charts and summary tables, and a REFRESH DB action. The visible declaration flow codes in the tables are IPT, INP, OUT, TNP, and COO.

5. Filter and Control Descriptions

Control	Type	Purpose	Expected Behavior
Declaration	Dropdown	Filter the dashboard by declaration flow.	The screenshot shows All Flows selected. A different available flow may be selected to narrow the dashboard results.
Status	Dropdown	Filter dashboard results by status.	The visible options include Select, Approved, Rejected, Awaiting, and Amendment. The screenshot shows Approved selected.
BAR	Toggle button	Display dashboard charts in bar-chart format.	BAR is visibly selected in the screenshot.
PIE	Toggle button	Display dashboard charts in pie-chart format.	Switches the chart presentation to pie view when selected.
REFRESH DB	Action button	Refresh the dashboard data.	Reloads or refreshes the dashboard data displayed on the page.

6. Dashboard Summary Areas

The screenshot shows three side-by-side summary areas. The left panel is labeled Today and the right panel is labeled This Month. The center panel title is obscured by the open Status dropdown in the supplied screenshot; therefore, this document refers to it as the middle period summary rather than assuming its exact label.

Area	Visible Content
Today	Chart and summary table for the current-day view.
Middle period summary	Chart and summary table. The title is not fully visible in the supplied screenshot.
This Month	Chart and summary table for the monthly view.
Summary tables	Rows include Overall, IPT, INP, OUT, TNP, and COO. Visible columns include Flow, Total, Approved, Rejected, Awaiting, with additional columns extending to the right.

Appendix A – UI Reference

Step 1 – Open the Dashboard

Select Dashboard from the left navigation menu. The system opens the Dashboard page and displays the declaration summaries, filters, charts, and tables.

Figure 1. Dashboard navigation

Step 2 – Select the Dashboard Filters

Use the Declaration dropdown to choose the required declaration flow and use the Status dropdown to choose the required status. In the supplied screenshot, Declaration is set to All Flows and Status is set to Approved.

Figure 3. Declaration and Status filters

Step 3 – Select the Chart Type

Choose BAR to view the summary as bar charts or select PIE to switch the chart presentation. The screenshot shows BAR as the active chart type.

Figure 3. Bar/Pie chart selector

Step 4 – Review the Dashboard Summaries

Review the charts and the corresponding summary tables for each visible period. Use the tables to compare Total, Approved, Rejected, Awaiting, and other available status counts for the listed declaration flows.

Figure 4. Period-based dashboard summaries

Step 5 – Refresh the Dashboard Data

Select REFRESH DB when the latest dashboard data is required. After the refresh completes, review the charts and tables again to confirm that the displayed information is current.

Figure 5. Refresh DB action

8. Visible Declaration Flow Codes

Flow Code	Documentation Note
IPT	Visible as a declaration flow row in the dashboard summary tables.
INP	Visible as a declaration flow row in the dashboard summary tables.
OUT	Visible as a declaration flow row in the dashboard summary tables.
TNP	Visible as a declaration flow row in the dashboard summary tables.
COO	Visible as a declaration flow row in the dashboard summary tables.

Note: The supplied screenshot does not define the expanded business meaning of these flow codes; therefore, the document preserves the codes exactly as displayed.

9. Validation and Expected System Behavior

- Changing the Declaration or Status selection should update or filter the dashboard information according to the selected value.
- The chart and table data should remain consistent for the same selected filters and period.
- Selecting BAR or PIE should change only the chart presentation and should not change the underlying summary values.
- REFRESH DB should refresh the displayed dashboard data without changing the user's selected filters unless the application is designed to reset them.
- If no records are available for a selected filter or period, the dashboard should show the application's configured empty/zero-data state.
- The exact error, loading, timeout, or refresh-success messages are not visible in the supplied screenshot and should be confirmed during QA.

Note:

Review the charts and the corresponding summary tables for Today, This Week, and This Month. Use the tables to compare Total and the status conditions Approved Permit, Rejected, Amendment, and Awaiting for the listed declaration flows.
